

6th International Table Grape Symposium

June 24-26, 2010

ARC Ballroom, UC Davis, Davis CA

Symposium: June 24 - 26, 2010

Technical Tour: June 28 - 30, 2010

Plant Growth Regulators a Highlight of 6th International Table Grape Symposium:

Research on the use of plant growth regulators (PGR's) to improve the quality of table grapes will be a featured topic in a Round Table discussion on Thursday, June 24, 2010, at the 6th International Table Grape Symposium. The discussion will have a global perspective, as researchers present

data from trials in Chile, South Africa, Italy and California. Several presentations will focus on the use of abscisic acid, a natural, newly available active ingredient, which has been widely reported to improve the color of red grapes.

Registration for the 3-day scientific program is \$400 prior to the April 30th early registration deadline and \$500 thereafter. Participants interested only in the Plant Growth Regulator program may register for a single day-- Thursday, June 24, 2010. Single day registration is \$175 per day.

EARLY BIRD REGISTRATION is now open through April 30, 2010 and can be accessed at: <http://groups.ucanr.org/GoGrapes2010/Registration/>
